

## Strawberry CLERY\*

**Plant:** variety with high chilling requirement, suitable for continental European environments. Plant has medium-strong vigor, globe shaped and with a medium-strong density. Leaves are medium green and highly bright. High productivity.

**Flowers:** at the same level of foliage or slightly below, medium sized and very rich in pollen. Flowering is abundant.

**Blossoming time:** very early.

**Fruits:** long conical shape, regular since the first harvest; bright carmine red color and extremely resistant to handling and transports. Fruits are large and homogeneous, with excellent organoleptic qualities: they are sweetly scented and pleasant.

**Harvesting time:** -8 days Elsanta®\*.

**Overall assessment:** very early variety, suitable for continental European environments, it presents an excellent combination of productive, commercial and taste features. This variety can be easily cultivated as pot plant with low environmental impact techniques, having good vigour and rusticity. It shows an excellent tolerance to leaf and root apparatus diseases. Thanks to its regular shape and to its epidermis brightness, fruit has a wonderful appearance besides its high taste quality and intense aroma.
