

## ● Apple **FUJION**<sup>(PBR)</sup>

**Tree:** excellent resistance to scab.

Open growth habit, medium vigour, easy to manage. Early fruiting, high and constant productivity, no significant alternate production. Susceptible to powdery mildew.

**Fruit:** similar to Fuji with an intense red colour and very evident streaks over almost the entire surface. It has a round, slightly elongated shape, very regular and more consistent in size than Fuji. The flesh is crisp, juicy and very sweet. Keeps well until late Spring and has good resistance to plant diseases during storage.

**Harvest time:** 23 days after Golden Delicious cl.B.
